

Cameron LNG Liquefaction Project

Cameron LNG is constructing a natural gas liquefaction and export facility adjacent to its existing liquefied natural gas (LNG) receipt terminal in Hackberry, Louisiana. Cameron has obtained approval from the U.S. Department of Energy (DOE) to export up to 14.95 million tonnes per annum (Mtpa), or approximately 2.1 billion cubic feet (bcf) per day, of LNG to all Free Trade Agreement (FTA) and non-FTA countries.

Project Description

Cameron LNG's existing terminal is situated along the Calcasieu Ship Channel near Hackberry, Louisiana. It is located 18 miles from the Gulf of Mexico and is connected to major interstate pipelines via the Cameron Interstate Pipeline.

The liquefaction project will use Cameron LNG's existing facilities, including two marine berths capable of accommodating Q-Flex sized LNG ships, three LNG storage tanks with a storage capacity of 480,000 cubic meters.

The completed liquefaction project is comprised of three liquefaction trains with an output capacity of 4.5 Mtpa each.

Once the facilities are fully operational in 2019, Cameron LNG will have the capability to:

- liquefy domestically-produced natural gas for export,
- import LNG and regasify it for delivery to domestic markets, and
- re-export foreign-sourced LNG.

With a total cost of approximately \$10 billion, many benefits—both locally and globally—will result from the construction and operation of the Cameron LNG liquefaction facilities.

Cameron LNG is strategically located near a major pipeline hub that can deliver domestic natural gas to the project.

Economic Benefits

With a total cost of approximately \$10 billion, many benefits—both locally and globally—will result from the construction and operation of the Cameron LNG liquefaction facilities, including:

- Exports by our customers of approximately \$8.6 billion of LNG per year and an average of \$2.2 billion of natural gas liquids production, averaging total trade balance benefits of \$11.43 billion per year based on 2016 dollars.
- Approximately 160 new full-time jobs at Cameron LNG and over 60 new jobs at the corporate office in Houston, TX.
- Engineering and Construction of the project will result in the creation of approximately 6,500 on-site jobs in Southwest Louisiana.

Commercial Development Agreements

Affiliates of Sempra Energy, ENGIE, Mitsubishi Corporation (through a related company jointly established with Nippon Yusen Kabushiki Kaisha) and Mitsui & Co., Ltd. signed a joint venture agreement to support the development, financing and construction of the liquefaction facility.

Cameron LNG signed 20-year tolling agreements with ENGIE and affiliates of Mitsubishi Corporation and Mitsui & Co., Ltd. for the facility's liquefaction capacity.

Responsible Community Partners Community Investment

We are committed to the community where we live and work. We invest time, talent and financial resources to help improve the quality of life for our customers, neighbors and employees. By partnering with local organizations, we maintain a commitment to making a positive difference in our community.

Engineering & Construction

Cameron LNG awarded the engineering services contract to Foster Wheeler, and the engineering, procurement and construction (EPC) contract to CCJV, a joint venture between CB&I and Chiyoda.

Marshland creation - Construction of the liquefaction facilities will result in the creation of beneficial marsh wetlands in Cameron Parish.

Cameron LNG - As of March 2016
